

New Jersey American Water Plans for Routine Maintenance at its Raritan-Millstone and Canal Road Water Treatment Plants

CAMDEN, N.J. (JAN. 29, 2025) – As part of an annual, routine maintenance program, New Jersey American Water will temporarily change the water treatment process at its Raritan-Millstone Water Treatment Plant in Bridgewater and its Canal Road Water Treatment Plant in Somerset. The maintenance will take place the week of February 10, 2025 through mid-April, and consists of temporarily shifting from using chloramine to free chlorine.

This routine, annual change in treatment helps ensure the continued safety and reliability of water quality throughout the distribution system. During this period, some customers may notice a slight taste and smell of chlorine in their water. This is normal and will only be temporary until the system maintenance is complete. If customers experience this, the company suggests placing water in an uncovered pitcher in the refrigerator overnight to allow the chlorine to dissipate.

Throughout the maintenance period, New Jersey American Water will continue to monitor water quality in the system to provide water to customers that meets or surpasses federal and state drinking water standards.

The temporary treatment change applies to New Jersey American Water customers served by its Raritan-Millstone and Canal Road Water Treatment plants in the following communities. (*Communities with an asterisk purchase water from New Jersey American Water.*)
